E_Commerce - Point of sale
Apr 2023 – Mar 2024

It's an E-Commerce web application with Purchase, Sales & Stock management. Worked as a Front end developer

Technologies Used: ReactJs, Javascript, Redux, Visual Studio Code

Key Features :

- User Onboarding: Smooth registration and login processes.
- Product Listing and Filtering: Users can view and filter products based on categories and price.
- Shopping Cart: Easy management of items added to the cart.
- Order Management: Users can view order history and track current orders.
- User Reviews and Ratings: Users can review and rate purchased products.
- Responsive Design: Ensures usability across various devices.

Role :

- Contributed to the design and implementation of the Ecommerce project.
- Developed user authentication functionalities, including login and signup.
- Designed and implemented the shopping cart UI and its functionalities.
- Performed unit testing to ensure code quality and reliability.
- Utilized Redux for efficient state management across the application.
- Collaborated with the team to meet project deadlines and requirements.

Health Care – Client Delivery
Jul 2022 – Mar 2023

A Health Care React application is a dynamic, component-based user interface built using JavaScript to create fast and interactive web applications for healthcare services and solutions.

Technologies Used: ReactJs, Javascript, Redux, Visual Studio Code

Key Features :

- User Authentication
- Appointment Scheduling
- Virtual Consultations
- Health Records Management

Role :

- Developed User Authentication: Implemented secure login and registration features for patients and healthcare providers.
- Designed Appointment Scheduling System: Created an intuitive interface for scheduling, rescheduling, and canceling appointments.
- Implemented Virtual Consultations: Integrated real-time video and chat functionalities for online consultations.
- Managed Health Records System: Developed a secure system for storing and retrieving patient medical records.

Website Development - Client Delivery   Jan 2022 – Jun 2022

A website creation project involves designing and developing a user-friendly interface with responsive design principles, ensuring seamless functionality across various devices to meet client specifications and user expectations.

Technologies Used: ReactJs, Javascript, Visual Studio Code

Key Features :

- Responsive Design
- Intuitive Navigation
- Scalability
- Security

Role :

- Frontend Development (React): Implementing user interface components using React library.
- State Management: Utilizing React's state and props for managing component state and data flow.
- Component Lifecycle: Handling component lifecycle methods to manage rendering and updates efficiently.
- UI Design Integration: Integrating UI designs and ensuring responsiveness across devices using CSS and media queries.
